

At Australian Cancer Research Foundation, we know that only brilliant can tackle something as big as cancer - ideas, science, technology and innovation.

ACRF backs pioneering cancer research programs targeting scientific breakthroughs, across all cancers. Our outstanding panel of Australian and international cancer experts evaluate applications to ensure ACRF funds the best projects, across Australia, providing cutting edge technology and equipment vital to enable progress.

Your support will accelerate more effective treatments, earlier detection and better prevention, saving lives and transforming quality of life for people diagnosed with cancer.

Cancer is an important cause to support.

2 in 5 Australians will be diagnosed with cancer in their lifetime; the other 3 will be impacted in their lifetime. That's our whole Australian population who will come face to face with cancer at some point.

About 150,000 Australians are diagnosed with cancer each year, that's about 400 cancer diagnoses each day and about 49,000 people will lose their lives to cancer each year. This is not something we want to pass on to future generations.

ACRF has a unique track record of pushing boundaries and has achieved significant outcomes, including:

- the cervical cancer (HPV) vaccine
- new and more personalised cancer treatments
- founding partner of Zero Childhood Cancer
- improvements in radiation therapy and imaging
- early detection of melanoma, Australia's national cancer
- breakthroughs in cancer biology.

Since 1984, ACRF has enabled 82 research projects across 43 organisations – an investment of over \$174 million into cancer research across Australia.

You can feel confident that your support will

- ✓ Have impact
- ✓ Back progressive projects, blazing new trails
- ✓ Be spent effectively
- ✓ Be supported by good governance.

**Make a meaningful difference to managing cancer.
Join us in backing brilliant.**

We look forward to welcoming you on our mission to advance to a world without cancer.
